

PENETRATING SEALERS

Tech-Dry[®] Masonry Sealers

...Protect permeable surfaces against mould, staining, discolouration and deterioration

- Bricks
- Blocks
- Pavers
- Concrete
- Tiles
- Natural Stone

Tech-Dry[®]

innovative solutions

Tech-Dry masonry sealers are designed to penetrate into surfaces and permanently bond to the masonry to render the substrate water repellent or stain resistant. The treated surface dramatically reduces water absorption and efflorescence without changing the surface appearance and vapour permeability of the masonry materials.

Tech-Dry® Masonry Sealers

SILANES AND SILANE CREAMS FOR CONCRETE PROTECTION

PROTECTASILANE 100 - A 100% silane water repellent for treating concrete. It penetrates into the concrete forming a deep hydrophobic layer within the concrete surface providing protection against water and chloride ion ingress.

PROTECTASILANE - A high quality silane-based water repellent for reinforced concrete. It helps to resist water and chloride ion intake.

SOLID SILANE - A high quality water-based silane cream for protecting reinforced concrete against corrosion caused by water and chloride ion ingress. It is particularly useful for treating infrastructure such as wharves, bridges and buildings within marine environments.

SOLID SILANE 40 - A general purpose silane cream for high quality water repellent treatment for masonry including brick, stone and concrete. It is also an economic alternative to solid silane for reinforced concrete.

Pavers around pools or water features can be treated with Protectaseal for stain resistance

MASONRY WATER REPELLENT SEALERS

PROTECTACRETE - A general purpose water repellent sealer for use on bricks, stone, tiles and concrete providing long term protection against water penetration and efflorescence

TILE AND GROUT SEALER - A high quality water repellent for sealing tiles and grout including ceramic, concrete and natural stone tiles. Suitable for both internal and external tiled areas.

LIMESTONE WATER REPELLENT - Traditional water repellent sealer specially formulated to seal limestone buildings and structures against water penetration without affecting the natural limestone appearance.

LIMESTONE EMULSION - A user-friendly water-based silicone water repellent and surface binder for permeable Australian Limestone. It penetrates deeply into the capillaries of limestone surfaces to strengthen the substrate and make it water repellent.

If treated with Solid Silane, structures like wharves and bridges are protected from concrete corrosion and deterioration

Concrete block wall treated with Protectacrete retains the beautiful original appearance

STAIN RESISTANT SEALERS (OIL & WATER REPELLENTS)

PROTECTASEAL S - An oil and water repellent sealer providing stain resistance to ceramic tiles, concrete pavers and natural stone tiles. Suitable for both external and internal use on porous or polished surfaces.

PROTECTA OWR - A water-based oil and water repellent for stain resistant treatment for permeable substrates including tiles, pavers and stones.
